Questions and Answers to CCTID LOI – East Loveland Bridge Replacement

1. Are existing plans available? **No existing plans are available.**
2. Are there any DBE/EDGE/SBE goals? **No**
3. Will the Consultant or County be handling required permitting? **Will discuss at scoping meeting**
4. Is a hydraulic analysis required to size the new structure? **Yes**
 - a. Are there are overtopping of flooding concerns with the existing bridge? **No existing flooding that we are aware of**
5. Any widening of the roadway approaches? **The approaches will probably we widened. The consultant will have to coordinate their roadway/bridge alignment and geometrics with the City of Loveland, as they are in the process of making improvements to this stretch of roadway.**
6. Will a sidewalk be required over the new bridge limits? If only one side, is the North or South fascia more desirable? **Will discuss at scoping and during coordination with the City of Loveland.**
7. Maintain access to adjacent existing driveways throughout construction? **Yes, or make accomodations or temporary driveways with property owners if immediate access to their property may have to be removed temporarily during construction.**
8. Roadway guardrail be required on approaches? **Yes**
9. What is the anticipated construction schedule? **For design purposes, we anticipate construction starting in Late Summer of 2021.**
10. Any upstream or downstream channel improvements? **Potentially, will discuss at the scoping meeting.**
11. Will any portions of the retaining wall at the Southwest property be replaced, impacting property owner's driveway as well? **This would obviously depend on the design, size and location of the new structure. Our initial review would say that the existing wall will remain undisturbed and a new wall placed in front to eliminate the old wall. This will also be discussed at the scoping meeting. A more in depth analysis will determine what options we have for preserving this driveway and wall.**
