

**Clermont County Transportation Improvement District**  
**LOI #14 Clarification Questions #1**

---

**Q1:** It appears that the TID wants one submittal even if we are pursuing both projects. We would have 10 pages allowed for the body of the LOI and then 4 pages for the project approaches (2 pages per project) for a total of 14 pages. Is my assumption accurate?

**A1:** That is correct

**Q2:** For both projects, the TID is only asking for the consultant to be prequalified for non-complex roadway and right-of-way plan development. It also says the TID may use Task Order consultants for geotech. However, it also mentions on other sheets that it is anticipated that the consultant will subcontract any geotechnical borings. Does the TID want us to include geotechnical subconsultants on our team or should we not have any subs on this LOI? We are prequalified for both non-complete roadway and right-of-way plan development so if we don't have a geotech or R/W consultant on our team we would not have any subconsultants on our submittal.

**A2:** The CCTID will contract separately for any necessary geotech services. The consultant will not need to include a subconsultant for Geotech borings.
